Tensile testing of high-elongation polymers may be accomplished with a looser specification such as ASTM E83 Class C, where the relative error in percent strain is very small compared to the entire measurement range of the extensometer. Often the ASTM or ISO test procedure will define the extensometer class desired for testing.

EXTENSOMETERS - MTS Systems Corporation

An extensometer is a device that is used to measure changes in the length of an object. It is useful for stress-strain measurements and tensile tests. Its name comes from "extension-meter". It was invented by Charles Huston who described it in an article in the Journal of the Franklin Institute in 1879. Huston later gave the rights to Fairbanks & Ewing, a major manufacturer of testing machines ...
